Algoritmos de búsqueda

Materia: Fundamentos de Inteligencia Artificial

Prof. D.Sc. Aboud BARSEKH-ONJI

Facultad de Ingeniería
Universidad Anáhuac México

8 de octubre de 2025

Agenda

1. ¿Qué es un algoritmo de búsqueda?

What is a search algorithm?

Big Idea

- An algorithm is a set of instructions that are followed to solve a problem.
- A search algorithm is a specific type of algorithm that is used to find a particular item or group of items within a larger set of data.
- Search algorithms are commonly used in computer science and information retrieval to locate specific information within databases, files, or other data structures.
